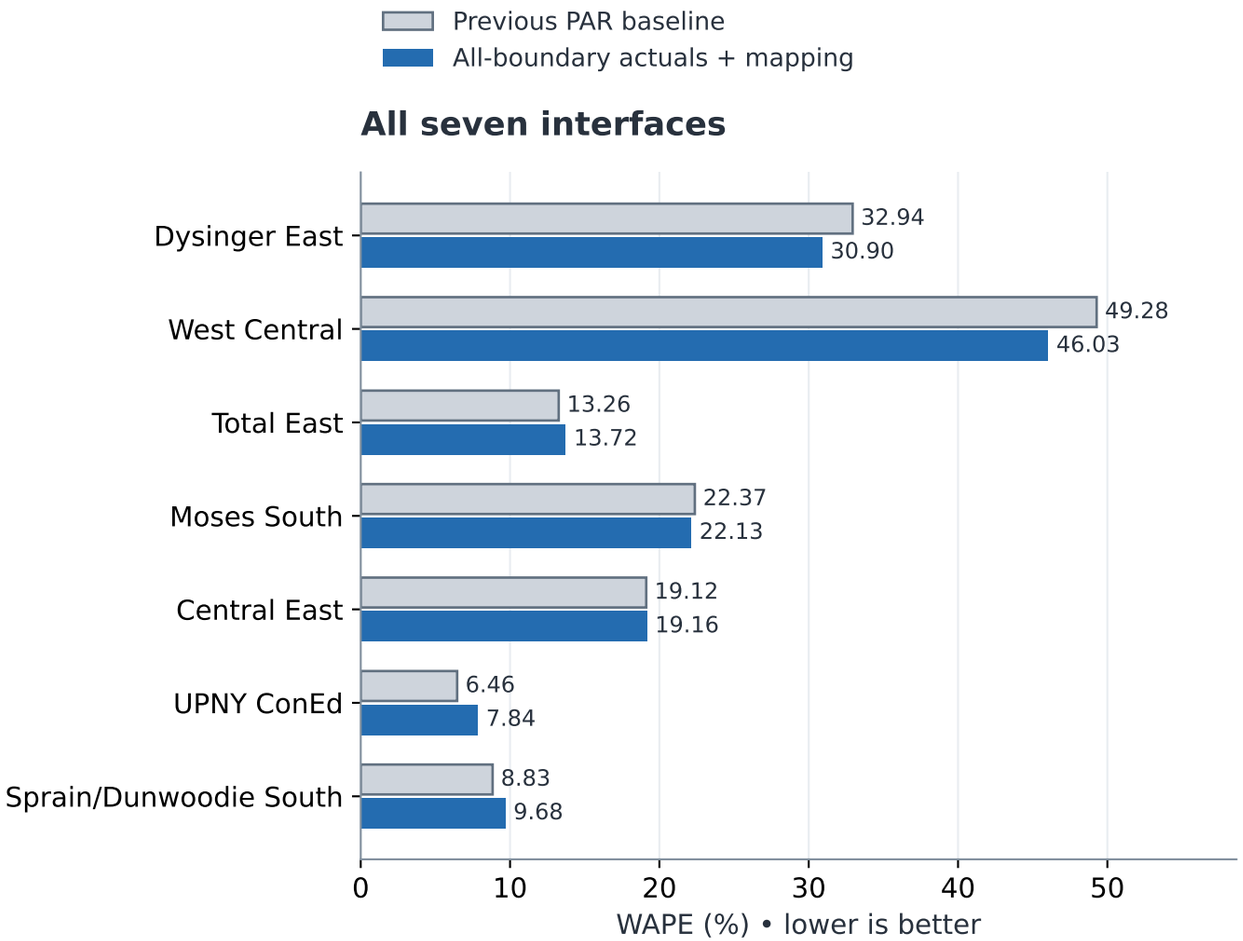
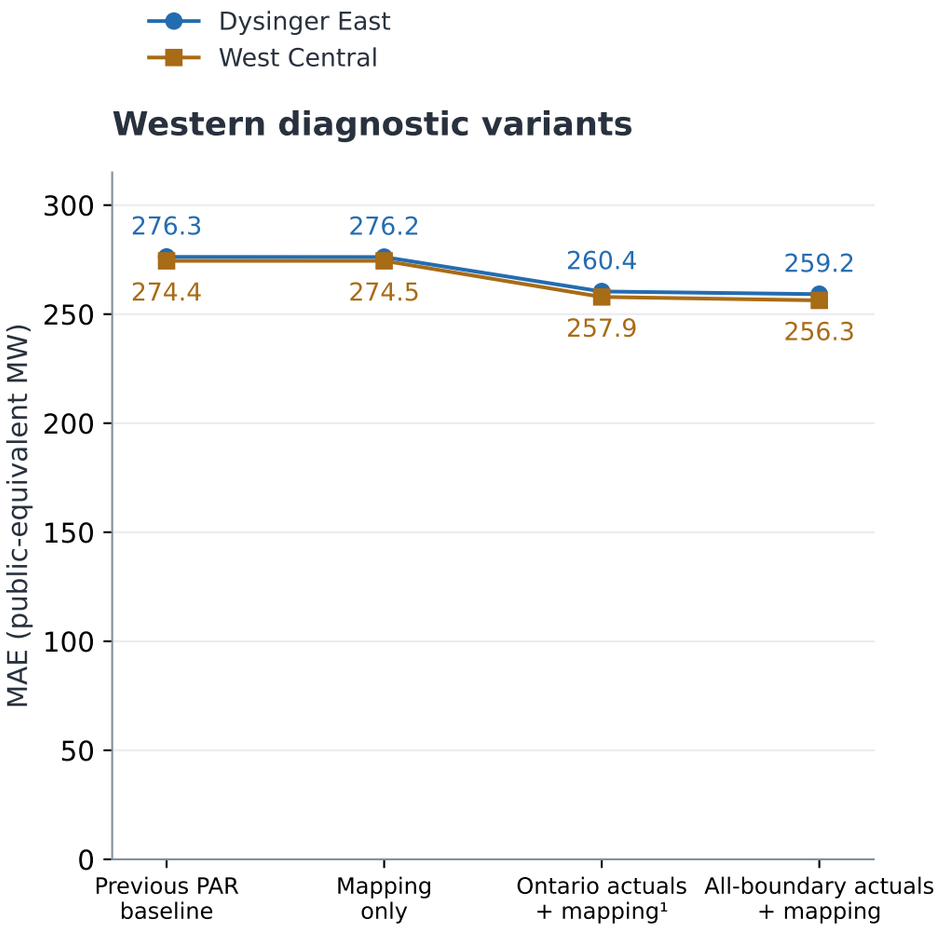
2025 western-source corrections

Dated topology • 8,651 identical qualified hours • fixed 148-bus network • no internal-interface fitting





¹ Ontario-only retains schedules at other boundaries and is a mixed-source diagnostic.
Primary case uses NYIS-reported regional actuals. Unit generation remains a bounded source-prior reconstruction; individual tie flows, the new Dysinger PAR, and complete 2025 physical interface membership remain unresolved.
