

Compact New York testbed: load allocation and independent flow prediction

Summer example: July 29, 2025, 18:00–19:00 EDT

Four reserved 2025 hours: predicted minus NYISO hourly interface flow

66 NY buses · fixed scale $\gamma = 0.35576$ · source estimates are not observed zonal dispatch
* All interface operators remain approximate; no internal flow targets entered the prediction fit.
