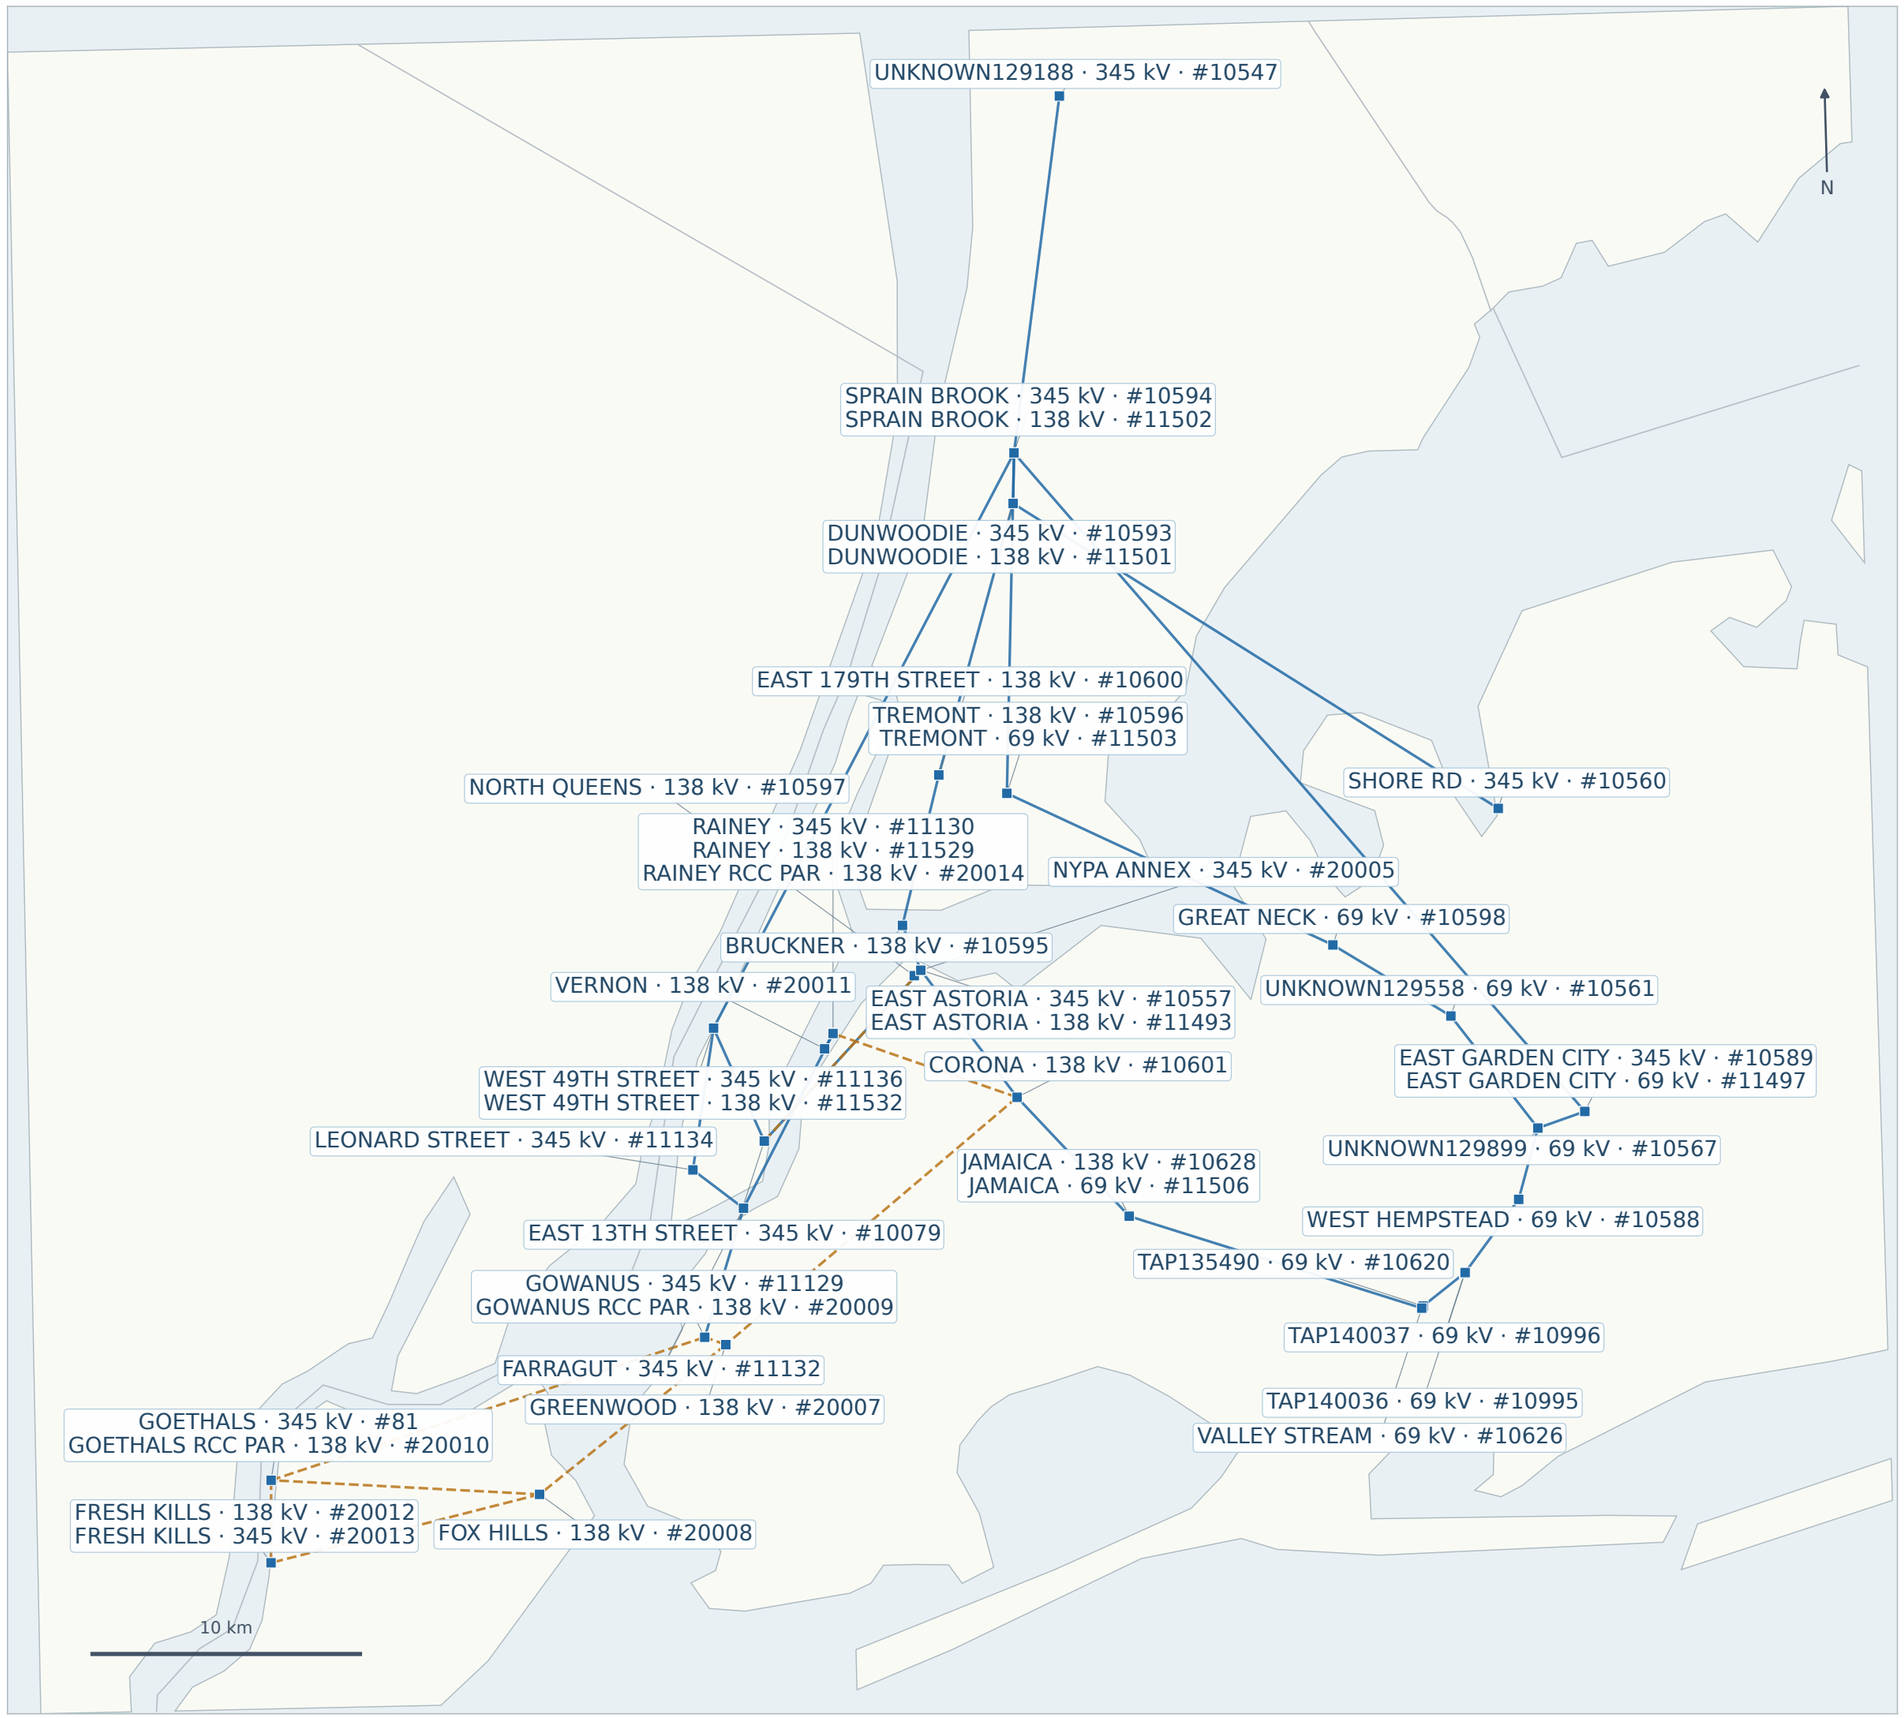
Geographic NYC and western Long Island detail

All positions use source station points; co-located voltage-level buses share a label group

Added bus
Original bus
Added historical circuit
Added assumed connection
Replaced original (inactive)
Retained original branch
Unchanged DC equivalent



Markers use station anchors; labels use leader lines. Curves separate coincident branch categories. Lines show model connections, not physical routes.
≈ Dover: address-level approximation. † Northport: station-level anchor; model138kV / source115kV. Other original NPCC points are approximate model locations.
