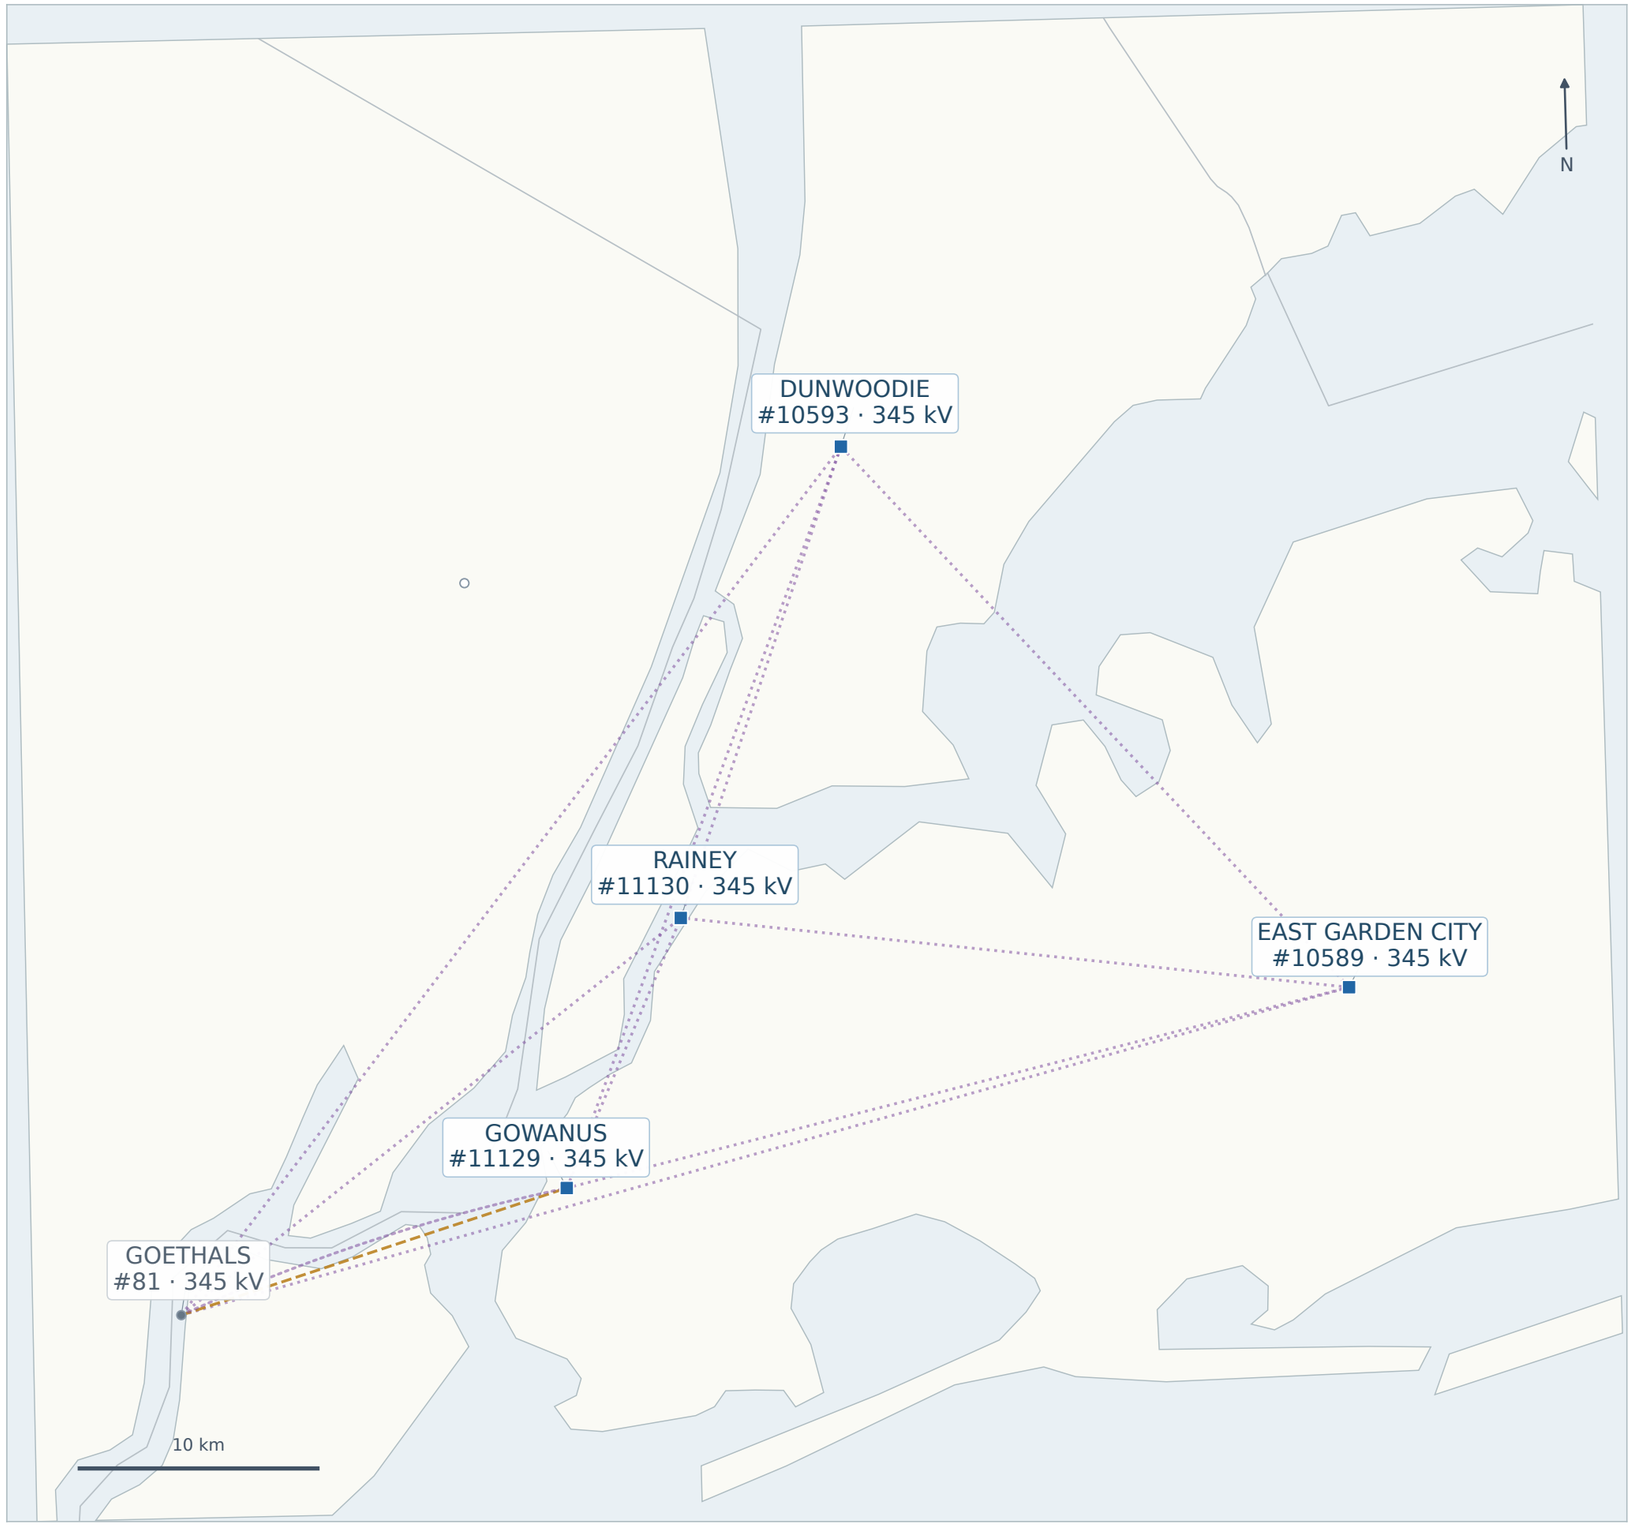
NYC and western Long Island — slim geographic detail

Four added 345-kV receiving stations · equivalents explicitly separated from direct source circuits

- Eight added 345-kV stations
- Approximate original model point
- Original retained (216)
- Direct source circuit (14)
- Declared connection (5)
- DC response equivalent (30)
- Original replaced / inactive (9)
- Fixed DC transfer channel (4)



Lines show model connections, not transmission routes. Purple dotted connections are passive DC equivalents, not physical circuits.

145 mapped points + 3 aggregate proxies. Original locations: 129 approximate model points, 8 station anchors, 3 unlocated proxies. † Northport is a facility-level anchor.
